

I am writing concerning rm10352. I have been a long standing operator of the 1800-2000 khz band for over 30 years. I feel very strongly that a sub band for cw/A1 emissions is necessary.

160 meters is a very difficult band to communicate to overseas points. The mixture of ssb/A3A wide band signals causes very difficult communications. The voluntary band plan has not solved the problem and separate sub bands for cw/A1 are in order.

Sincerely Austin Regal N4WW
